-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Terminal Disclaimer***

1. The terminal disclaimer filed on 18 November 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 6632239 has been reviewed and is accepted. The terminal disclaimer has been recorded.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

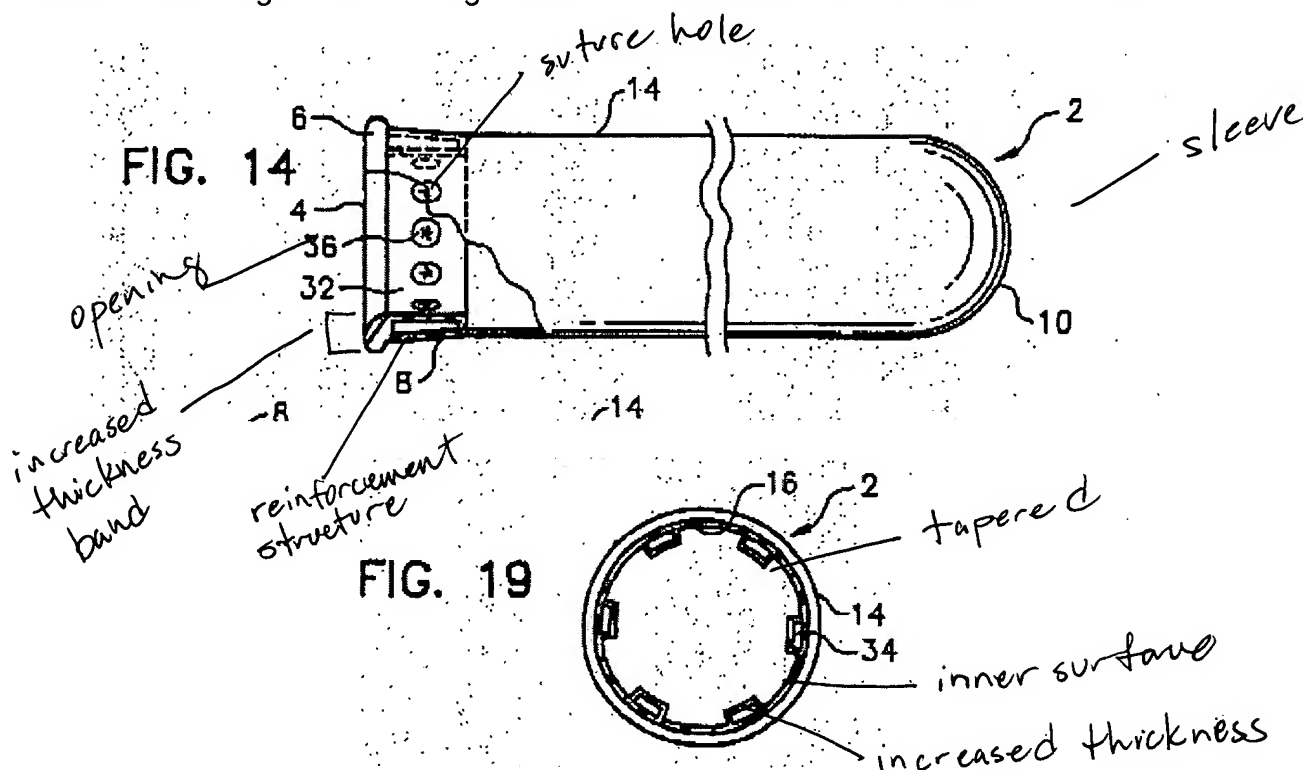

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9, 11-21, and 23-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Schwartz 5513652.

4. Schwartz teaches a constriction device that constricts body tissue, the device comprising: an elongated sleeve, at least one opened end and being formed from elastic material; at least one suture hole; a reinforcement structure; wherein the reinforcement structure is an increased thickness of the sleeve about the at least one suture hole; wherein the sleeve includes a plurality of suture holes and wherein the reinforcement structure is an increased thickness about each of the suture holes; wherein the suture holes are distributed about the sleeve; wherein the suture holes are distributed about the sleeve near to the at least one opened end; wherein the increased thickness of the sleeve forms a band circumscribing the sleeve and wherein the suture

Art Unit: 3731

holes extend through the band; wherein the band is near to the at least one opened end; wherein the reinforcement structure includes a tapered cross-section; wherein the sleeve has an inner surface and wherein the increased thickness extends from the inner surface of the sleeve, it would be inherent the reinforcement structure made of elastic material has a higher tear strength because it is thicker than the rest of the device.

### Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 10, 22, and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schwartz.

Art Unit: 3731

7. Schwartz discloses the invention except for the sleeve has an increase thickness extending from the outer surface. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the increased thickness extending from the outer surface, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70.
